                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C, Function:
A, Description: G protein-coupled receptor for chemokines MIP-lalpha, MIP-lbeta and RANTE
A, Description: G protein-coupled receptor for chemokines MIP-lalpha, MIP-lbeta and RANTE
A, Mote: probably acts to control granulocyte proliferation and differentiation
C, Superfamily: vertebrate rhodopsin
C, Keywords: AlDS, G protein-coupled receptor; glycoprotein; phosphoprotein; transmembrane
F; 32-56/Domain: transmembrane #status predicted <TM1>

A, Description: The expression of the chemokine A, Reference number: $52443
A, Reference number: $52443
A, Status: preliminary
A, Molecule type: DNA
A, Residues: 21-378 EBUR>
A, Genetics:
C, Superfamily: vertebrate rhodopsin
C, Superfamily: vertebrate rhodopsin
C, Keywords: G protein-coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cuery Match

A.Title: Characterization of the murine mu opioid receptor gene.
A.Fitle: Characterization of the murine mu opioid receptor gene.
A.Facession: A57510
A.Status: nucleic acid sequence not shown
A.Status: nucleic acid sequence not shown
A.Status: nucleic acid sequence not shown
A.Status: 1-398 «KAU»
A.Residues: 1-398 «KAU»
A.Residues: 1-398 «KAU»
A.Title: Genomic structure analysis of promoter sequence of a mouse mu opioid receptor y Proc. Natl. Acad. Sci. U.S.A. 91, 9081-9085, 1994
A.Title: Genomic structure analysis of promoter sequence of a mouse mu opioid receptor A.Reference number: 148665, MUID:94377496; PMID:8090773
A.Reference number: 148665
A.Status: translated from GB/EMBL/DDBJ

MIPLIDIATION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIPLI-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
differentiation.
C. I- SUMLEARIY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCIION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.
-1- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

Sequence evolution of the CCR5 chemokine receptor gene in primates.";
"Sequence evolution of the CCR5 chemokine receptor gene in primates.";
Mol. Biol. Bvol. 16:1145-1154(1999).
-!-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of gramulocytic lineage proliferation or
differentiation.
-!-SUBCELIULAR LOCATION: Integral membrane protein.
-!-SUBCELIULAR Elongs to family 1 of G-protein coupled receptors.
                                                         30-MAY-2000 (Rel. 39, Created)
30-MAY-2000 (Rel. 39, Last sequence update)

Biol. Evol. 16:1145-1154(1999).
-!- FUNCTION: Receptor for a C-C type chemckine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
                                                                                                                                      Pygathrix bieti (Black snub-nosed monkey) (Rhinopithecus bieti).

Biol. Evol. 16:1145-1154(1999).

-!-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or

CC -1- FUNCTION: Receptor for a G-C type chemokine. Binds to MIP-1-alpha,

CC -1- FUNCTION: Receptor for a G-C type chemokine. Binds to MIP-1-alpha,

CC -1- FUNCTION: Receptor for a G-C type chemokine. Binds to MIP-1-alpha,

CC -1- FUNCTION: Intagral membrane protein.

CC -1- SUBCELULAR LOCATION: Integral membrane protein.

CC -1- SUBCELULAR LOCATION: Integral membrane protein.

CC -1- SUBLAILY: Belongs to family 1 of G-protein coupled receptors.

CC -1- SUBLAILY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.
